

Octopus protocol

Everything you need to know

Affordable solution

The protocol facilitates affordable solutions for the creation of synthetics by reducing the collateral amount. The inherent mechanism lowers costs with minimal usage of oracles.

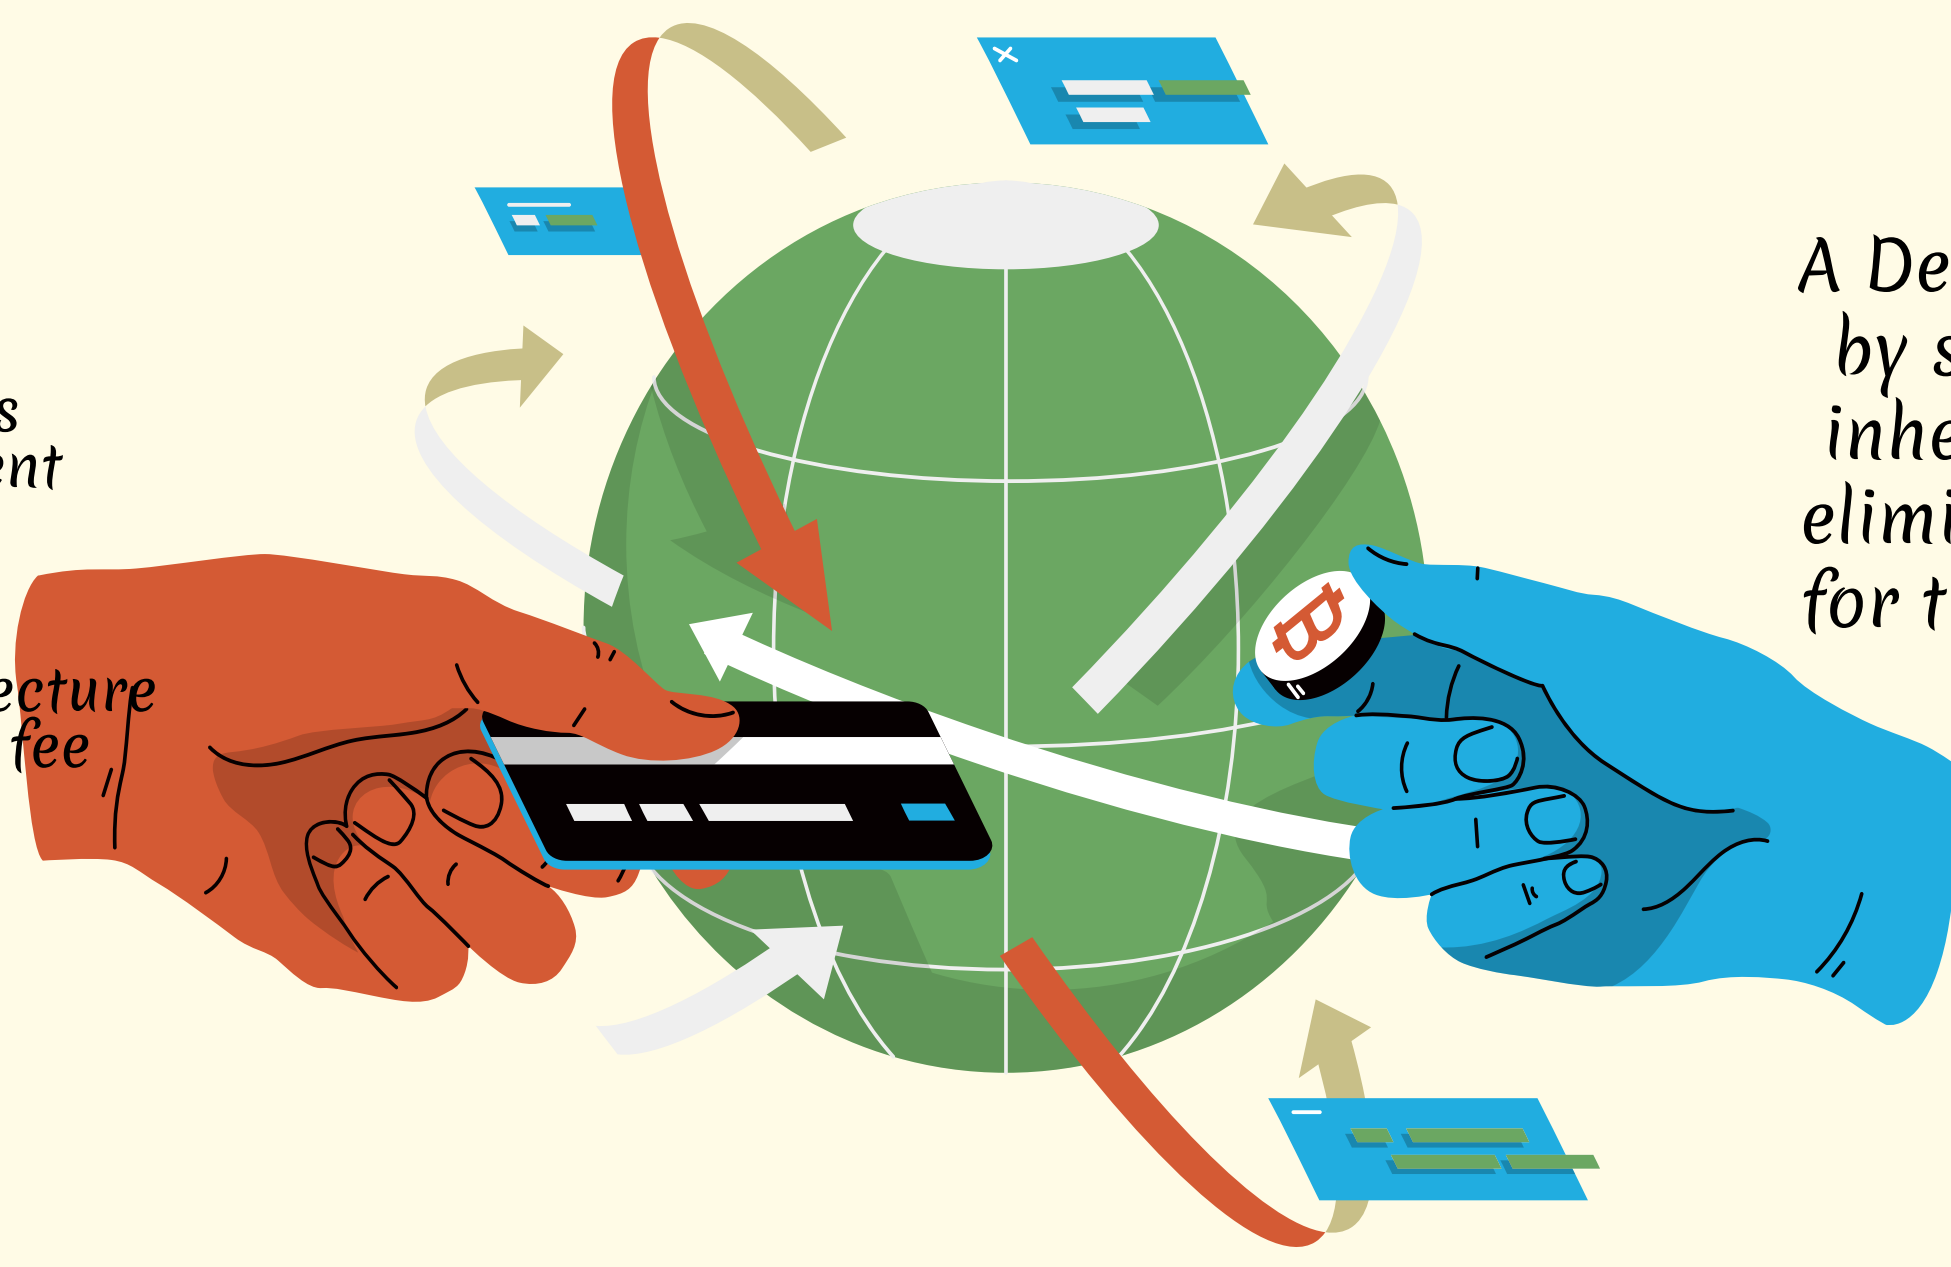

Less trust More truth

A DeFi protocol powered by smart contracts, its inherent infrastructure eliminates trust barriers for trade and settlement of derivatives.

Huge ecosystem

- Trade Derivatives
- Asset management
- User-friendly collateral management
- Trustless architecture
- Minimal trading fee
- Staking

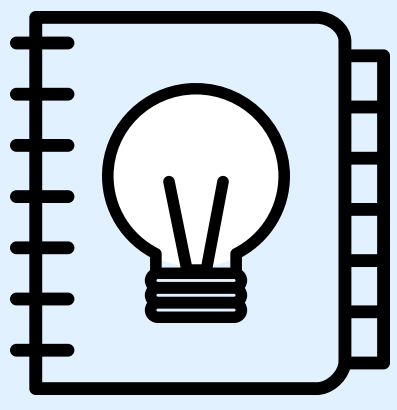

Limitless Possibilities

Build tokens that track the price of any asset in real time. Create customizable financial contracts comprising multiple assets.

Community driven

Built and governed by the community of OPS token holders to enable a fairly distributed and decentralized infrastructure.

Octopus Protocol Ecosystem

01 Trade derivatives

Gain unlimited exposure to several instruments from multiple derivative assets such as stocks, bonds, equities, digital assets, futures - raised as tokenized assets. Low margin requirements, and innovative hedge instruments with no liquidation risks.

02 Asset management

Manage all your assets and positions from Octopus' non-custodial wallet so that the control of your funds remains in your hands. Track your trading history and overall portfolio balance from your wallet.

03 Collateral

Octopus offers affordable solutions to create synthetic assets tracking prices in real-time. Manage your collateral with a user-friendly and intuitive trading platform.

04 Trustless architecture

Exchange synthetic assets leveraging the seamless features of a traditional exchange platform in a peer-to-peer, transparent, and trustless architecture.
